

Why DO WE REQUIRE MASKS?

- The number of new cases and deaths continue to rise.
- Those with no symptoms can infect large numbers of people.
- Those who develop symptoms may take 2 to 10 days to do so, and can infect large numbers of people before they get sick.
- Those who are sick may mistake the virus for a cold or allergies and infect large numbers of people.
- The use of appropriate face masks can reduce transmission by blocking airborne particles and droplets.
- Even a cloth face covering is better than no mask at all.
- The CDC recommends wearing cloth face coverings in public settings where other social distancing measures are difficult to maintain.
- Physicians and scientists agree that face masks and social distancing are still necessary precautions to contain the virus.
- The health of our patients and staff are our number one concern.

Please note – we do not permit masks with valves as they have been found to allow droplets and particles to escape.
